

# Green Pin® ROV shackles:

Winner of “Best Product” in LEEA Innovation Awards!

A wide range of very impressive entries were carefully reviewed, and the judges agreed that Van Beest had demonstrated the most compelling evidence of innovative thinking to address demanding lifting applications.

Green Pin® ROV shackles have a specially designed quick release that can be manipulated easily by an ROV's hydraulically operated arm, without compromising safety. Developed specifically for sub-sea applications, these products overcome the limitations of solutions based on standard products, and can significantly reduce the time taken to disassemble shackles underwater.
